

GMT Benelux BV is known as the vibration control specialist in the Benelux. The organisation is built on 3 solid foundations: customer specific solutions, industry specific solutions, and standard solutions. For all vibration challenges we do have the best solution. We will realise this by applying, knowledge, experience, and products in the area of vibration control.

GMT Benelux BV supplies many industries like machine building, rail vehicles, aircraft industry and defence. GMT Benelux BV was founded in 1987 as an independent supplier of products manufactured by GMT GmbH. Our relation with GMT Gummi-Metall-Technik GmbH still provides us access to the latest technology and products in vibration control. Over the years GMT Benelux BV has been evolved into a supplier offering solutions for vibration control.

Customer specific solutions GMT Benelux BV is a true expert in the field of vibration challenges. We act as an extension of your R&D department where solutions for vibration challenges need to be developed. At GMT we understand concepts like Total Cost of Ownership (TCO) and Overall Equipment Efficiency (OEE). We not only look at the vibration challenge in isolation, but also look to the installation, application, maintenance and your product quality. On request GMT engineers will analyse a vibration problem and if necessary measurements will be carried out. The vibrations will be reported, and following analysis and calculations custom solutions will be generated. Solutions will be translated into drawings and prototypes. Following testing and any adjustments the customer will approve the solution. This is the start for a long lasting relationship in the field of vibration solutions.

Industry specific solutions For many years GMT Benelux BV delivers industry specific and application specific solutions for vibration challenges. We offer a wide range of products for:

- Machine builders;
- Rail vehicles;
- High tech industry;
- Offshore & marine;
- Aircraft industry;
- Defence and vehicle industry.

Many products are developed in close cooperation with the OEM or are approved by the OEM partner. As an example we deliver solutions for Siemens rail vehicles, Airbus airplanes, and Leopard combat tanks. GMT Benelux BV can make use of the expertise, production and development of the German GMT Gummi-Metall-Technik GmbH.

Standard solutions GMT Benelux BV delivers a wide range of high quality standard products. The standard products are used in many applications like machine building. We offer vibration dampers in the most common sizes and quality. For applications in a humid environment we can also deliver a wide range of stainless steel products. Our standard products are delivered through technical trade companies (resellers) and via our own sales department directly to end-users. For most of the products we are able to deliver

from local stock. We also offer logistical services such as delivery on demand, specific packing and assembly.

Vibration dampers GMT Benelux BV supplies standard vibration dampers from small to large. The required load is most important. Also environmental factors do influence the selection of the right damper. Dampers used in moist or oil containing areas do require different grades of rubber. In case you are wondering which standard solutions fits your requirements we offer our assistance to support you.

Product groups

GMT Benelux BV offers more than 2.000 standard products divided in the following product groups:

1. Machine feet
2. Rail elements
3. Cylindrical dampers
4. Miscellaneous dampers

Vibration measurement and consulting services Vibration control challenges are found on many locations and in many situations. Vibrations can have huge impact on comfort and even lead to unsafe working conditions. GMT Benelux BV has certified vibration analysts able to analyse unwanted situations. Subsequently we will work towards practical solutions.

Application areas

- Railway
- Offshore & marine
- High tech
- Machine building
- Defence
- Aircraft
